

CONTENTS

Optimisation of wet winding process parameters for the production of type IV hydrogen pressure vessels with high gravimetric storage density F. Schmidt, M. Walter, J. Richter, S. Geller, M. Gude	157
Development of the properties of magnesia alumina spinel-based refractory composites with modifying oxides A. Bąk, B. Surówka, R. Prorok, D. Madej	166
Cu/graphene composite coatings produced by electrochemical reduction method under semi-technical line conditions on electrical equipment components M. Gostomska, G. Cieślak, K. Skroban, A. Mazurek, A. Gajewska-Midziątek	181
Advancing Green Cement: Reaction Kinetics and Mechanical Performance of Carbonated Wollastonite-Limestone-Gypsum Blended Composites for Sustainable Construction D. Praseeda	190
Mechanical behaviour of filament-wound GFRP and BFRP composite tubes P. Stabla, K. Kamiński, Ł. Waclawek, K. Paczkowska, Z. Pacholec, M. Barcikowski, W. Błażejowski	200
Production technology and properties of layered composite coatings used for boiling heat transfer augmentation R. Chatys, S. Honus, Ł.J. Orman	209
A new approach to determining the elastic modulus of structural materials V. Zhigun, R. Chatys, E. Plume	217
